

VA INSIGHT PORTAL™ CAPABILITIES

RECORD MANAGEMENT

Create and update records including entities and links

SEARCH & QUERY

Conduct a search of records within the repository and build queries to identify complex links

VISUALIZATION

View and expand upon associations between entities with one click

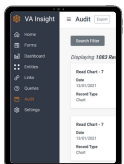

REPORTING DASHBOARD

Gain insights from your database with customized visuals

DOCUMENT SHARING

Upload a photo, document, or field report directly to the record of interest.

AUDITING

Audit actions performed by Users on the Platform

The VA Insight Portal™ is a browser-based, modern 3-tier architecture solution for Investigators and Field Operators that streamlines data collection and provides tactical visualization to expedite the intelligence cycle and extend critical information to operational users on the go.

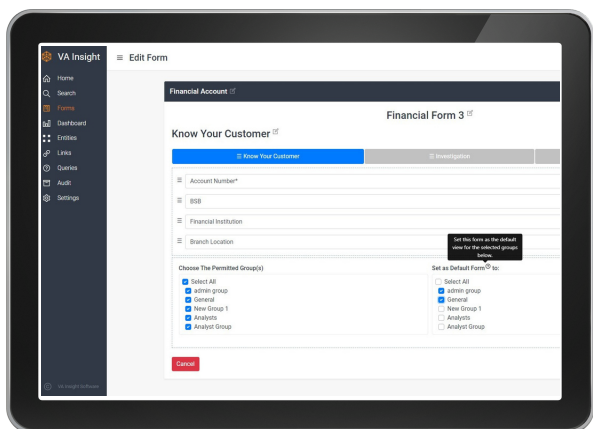

Why VA Insight

We may be a startup, but with more than 20 years of collective experience in Law Enforcement, Defense & National Security, Humanitarian Aid and Software Development around the world, our innovation is driven by renowned firsthand experience, credibility, trust and collaboration.

What We Do

The Insight Portal™ is built on a market-tested, leading technology stack with an easy easy to follow, Guided User Interface (GUI) deployment framework. There is no need to migrate data, as the Portal connects to an MS SQL source database allowing authorized users to read and write back to the data source.

Accessible from any device with an intranet, or browser connection, the Insight Portal™ empowers operational users to create records, conduct a search of records within the repository, build queries to identify complex links and visualize data for further network analysis.

- Users may also manage records using configurable web forms which supports conditional logic.
- Streamline the data collection process by linking multiple forms required by business needs.

The Insight Portal™ version 2.0 includes enhanced search capabilities powered by Elasticsearch. Insight search delivers full-text search across all fields and within attached documents for efficient information gathering. It also provides results filtering to narrow and customize search results to find exactly what you are looking for.

Increase operational efficiency and expedite intelligence driven decision making with the powerful, cost-effective VA Insight Portal™.
